

Classic strength

ALKOglue™ sealed for your protection every day

ALKOglue™

ALKOglue™ two piece liners are for gluing on the container and have a polyolefin bond between the substrate material and the aluminium membrane. ALKOglue™ is available either with foam backing material or with board backing material to meet different customers' requirements.

This wax-free solution ensures a clean peel and the separation of the sealing foil from the substrate is initiated at the opening of the jar (mechanical separation), also making a "crackling" noise at that time, thereby assuring tamper-evidence.

The ALKOglue™ liners are inserted behind a retention feature within the closure design to rotate freely.

Meyer Seals® ALKOglue™ products protect coffee, spreads and all powdered goods against oxygen and moisture whilst retaining aroma. ALKOglue™ can also be supplied printed in up to 6 different colours.

Meyer Seals® offers you the optimal problem solving solution.

ALKOglue™ board

ALKOglue™ foam

To ensure a perfect separation between the re-seal and the membrane the wads should be inserted in the closure to rotate freely under the retention feature. (See diagram)
