

Simply safe

Securely sealed with ALKOsafe™
the perfect seal for containers with heavy duty demands

ALKOsafe™

ALKOsafe™ is Meyer Seals® range of wax laminated two-piece induction heat sealing liners.

It is suitable for sealing products in the following industries – aggressive chemicals (including agricultural chemical) mineral oils (including lubricant oils) and food (including edible oils).

The construction of the ALKOsafe™ liners and the sealing layers are designed to ensure a wide operating window and a maximum resistance to the product contents. ALKOsafe™ liners are available with either a foam backing material or with a board backing material to meet different customers' requirements. It is suitable for sealing on to all plastic containers.

ALKOsafe™ liners can also be supplied with individual print images up to six colours or holograms. The highly resistant material combination provides high-grade sealing which protects the environment from potential aggressive contents. Specific temperature conditions should be taken care of during transportation and storage of this specification.

Meyer Seals® offers you the optimal problem solving solution.
