

Pressure equalisation

ALKOvent™ customised venting solutions for every day usage

ALKOvent™

Creating tamper evident packaging that allows the product to breath without leaking that's ALKOvent™!

ALKOvent™ answers the concerns when products that are either hermetically sealed with an ALKOflex™ or ALKOsafe™ induction liner or pressure sealed with ALKOzell™ and there is requirement for the system to release or consume gases that would eventually cause the plastic containers to bloat or collapse and prevent the container from bursting.

ALKOvent™ allows bi-directional free passage of gases therefore equalising the pressure in the container.

Meyer Seals® offers you the optimal problem solving solution.
